## 5. GEOMETRIC SERIES $O(\text{by the largest term})$

Any Geometric Series with multiplicand factor of greater than 2 (if increasing) or smaller than  $\frac{1}{2}$  (for decreasing geometric series) is bounded above and below by the largest term. If it is an increasing Geometric series in that case it will be the last term, if it is a decreasing series it will be the first term. **For any constant - ratio (multiplication factor greater than 2 the above inequality is valid).**
